

Universal - Multifunction Communications Platforms

Diva Server is a family of robust all-in-one communication adapters offering connectivity via Analog, ISDN Base Rate (BRI) and Primary Rate (PRI) as well as E1/T1 type of interfaces. They are scalable, flexible, and can handle any combination of ISDN, GSM, V.90 analog, fax, and voice calls - making them a perfect choice for building Remote Access, Fax, Unified Messaging, Voice and CTI solutions. On board Digital Signal Processors (DSPs) perform key real-time tasks that would normally cause an excessive burden on the host server. With one dedicated DSP per channel, the Diva Server adapters offer maximum performance. Ranging from 2 to 240 channels per system, Diva Server adapters offer the right choice for all types of organizations

Diva Server BRI

Eicon Networks' Diva Server BRI is a high-performance, active PC-based server card that provides digital, analogue and GSM connections over an ISDN line. It is the perfect choice for corporate servers that need to support high-speed Internet access, remot»»»
